

OPEN HEALTH

FIRST HEALTH INFORMATION SYSTEM

**WITH AN OPEN SOURCE CODE AND FREE
SOFTWARE LICENSE - GPL V3**

01 Ukrainian health informational systems market

37

The total number of HIS connected to the Ehealth

22

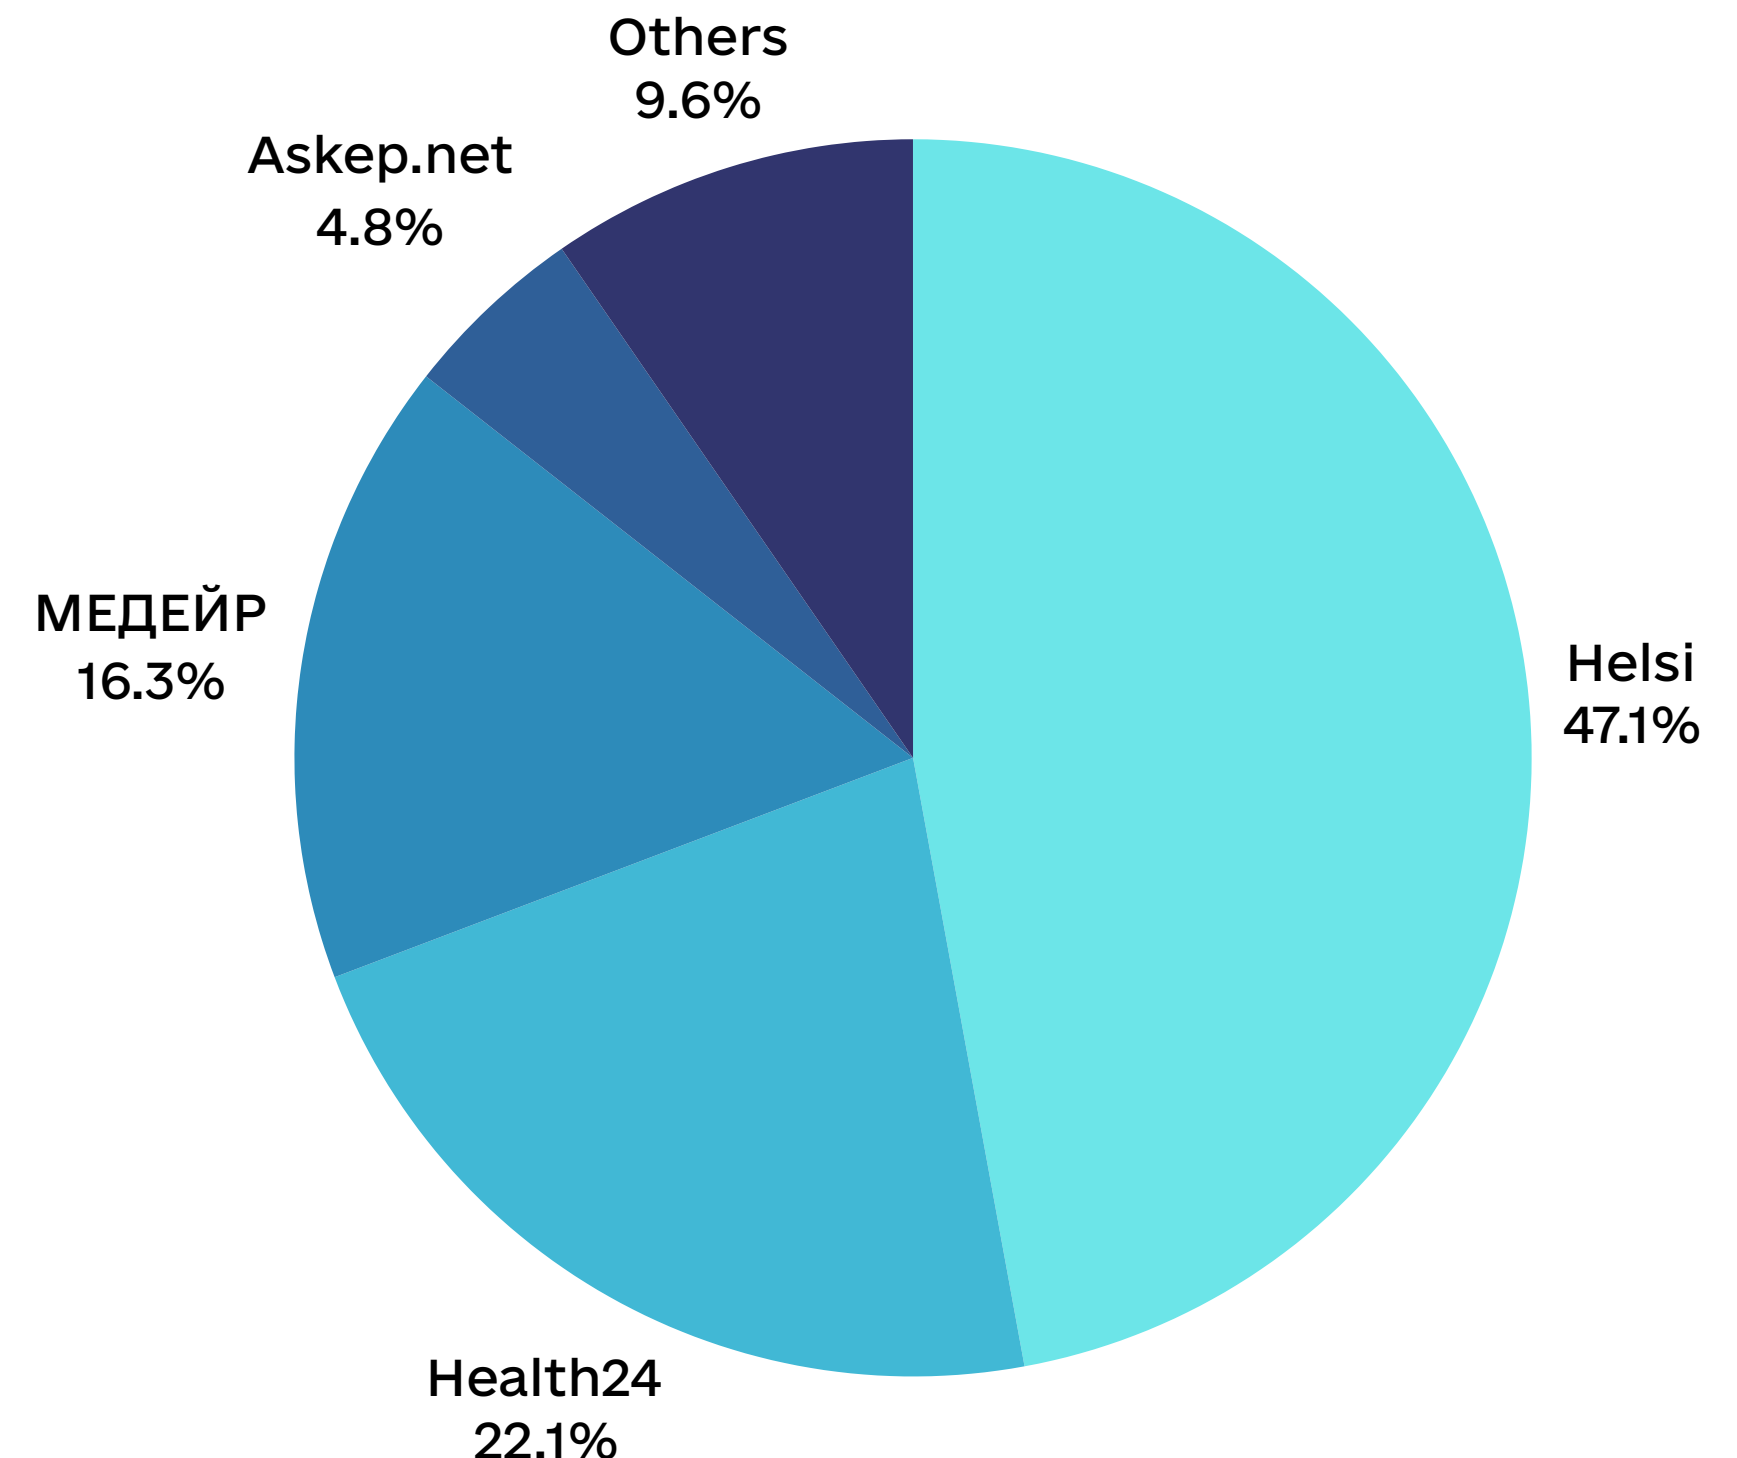

has the module for primary care providers

02 Key players on The Ukrainian health informational systems market

Most of the market is occupied by morally outdated and inconvenient systems for primary medical care: Helsi, Health24, МЕДЕЙР

While modern solutions are quite expensive and require a long time for employees to master them.

03 Depth of Market

25150

The number of primary care
doctors in Ukraine

500 uah

The number of primary care
doctors in Ukraine

**150 000 000
uah/year**

The total volume of the primary
care market

04 Open Source Collaboration: A Global Force for Good

By embracing open-source solution, we unlock the potential of a global talent pool. This collaborative spirit fosters continuous development, ensuring our HIS scales seamlessly and integrates effortlessly with existing software.

05 AI-Driven Insights: Empowering Better Care

Advanced Analytics

Uncover hidden trends and patterns within vast datasets.

Intelligent Recommendations

Receive data-driven suggestions for optimal treatment strategies

Reduced Error Rates

Mitigate the risk of medical mistakes for improved patient safety.

06 Modern Technology: Streamlining Efficiency

Reduced Development Time

Delivering a faster path to implementation and improved care.

Lower Costs

A financially accessible solution for hospitals of all sizes.

Deeper Automation

Streamline intra-hospital processes and services for enhanced efficiency.

07 A Perfect Fit for Hospitals

Our HIS offers a compelling proposition for US healthcare providers.

It delivers a **cost-effective** solution that automates tasks and empowers better decision-making, ultimately leading to improved patient outcomes.

08 Finance

Software as a service

- Charging for the tooling and platform to consume the software as a service via subscription

Custom development

- Creation of an information environment for the needs of a specific client

Voluntary donations

09 Innovations

Open source

The first medical information system in Ukraine and the world with open source code and open license GPL version 3

Cloud technologies

24/7 access from any device with maximum security

Integration with EHEALTH

Work with the electronic health care system is as convenient as possible

Intuitive interface

Quick learning to work with the system: a week to master all technical capabilities

Attentive support service

Always in touch with you, in chat or by phone, ready to solve problems

Telemedicine

Use of modern technologies for communication between the patient and the doctor

Use of AI

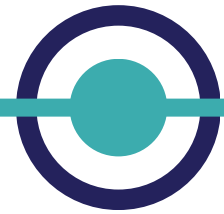

Application of Deep Learning technologies for comfortable work of the doctor

Security and transparency

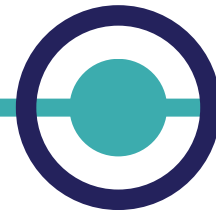

Open source code is tested by many developers who fix possible bugs

10 Roadmap

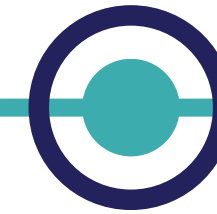

By 1.02.2024

- Evaluation of a startup idea.
- Creating a project.
- Technical documentation.
- Personnel recruitment.

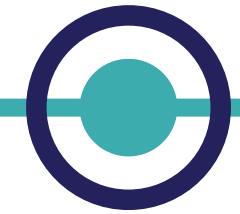

By 1.06.2024

- Development of an administrative module
- Conclusion of the contract and connection to eHealth.

By 01.10.2024

- Launch of a fully functional platform for the work of a primary care doctor.
- The first 10 customers.

By 31.12.2024

- Launch of the module for pharmacies.
- The first 50 customers.

11 Strategic plans

AI development

Module for providers
of specialized
medical care

Development of a
patient information
system

Module for
pharmacies
